

Procedure to install Pulse Secure client in MAC operating system

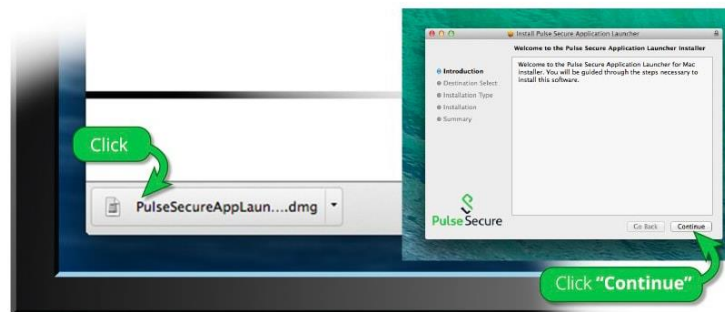

1. Log on to the browser with the following URL

<https://sslvpn.tifr.res.in/tifruser>

2. Log in with your credentials.
3. Click on start button, to install Pulse Secure Client.
4. Click on Yes button to proceed and then click on Download button to download the package. As per following screen shot.

After the application launcher has completed downloading, follow these installation steps.

Once you have completed the above steps, click [HERE](#) to continue with the Pulse Secure launch. We recommend selecting "remember" and "always" during the installation process.

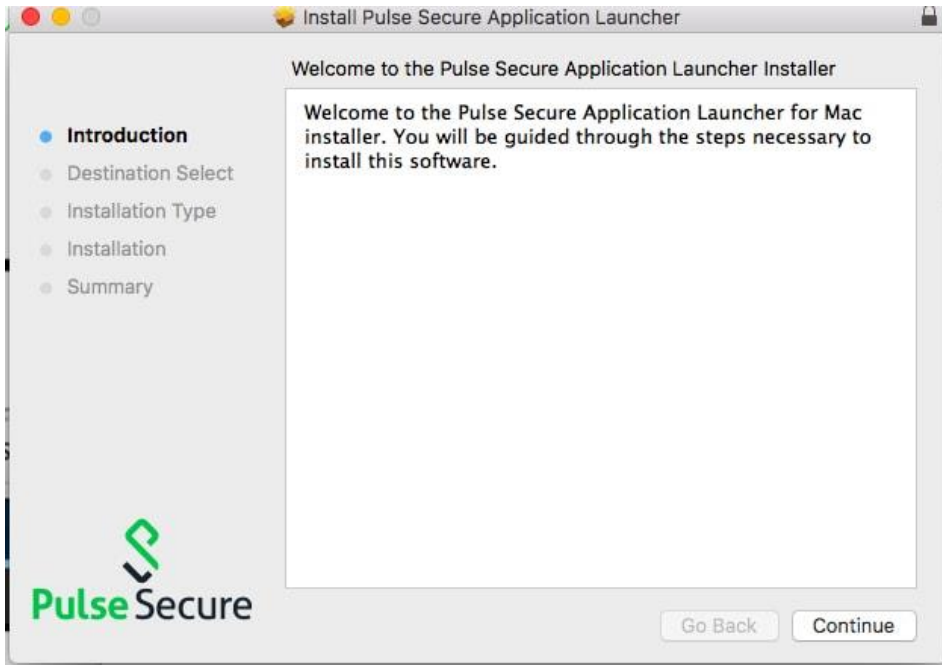

Once the Pulse Secure application is installed and started it will appear in your system tray.

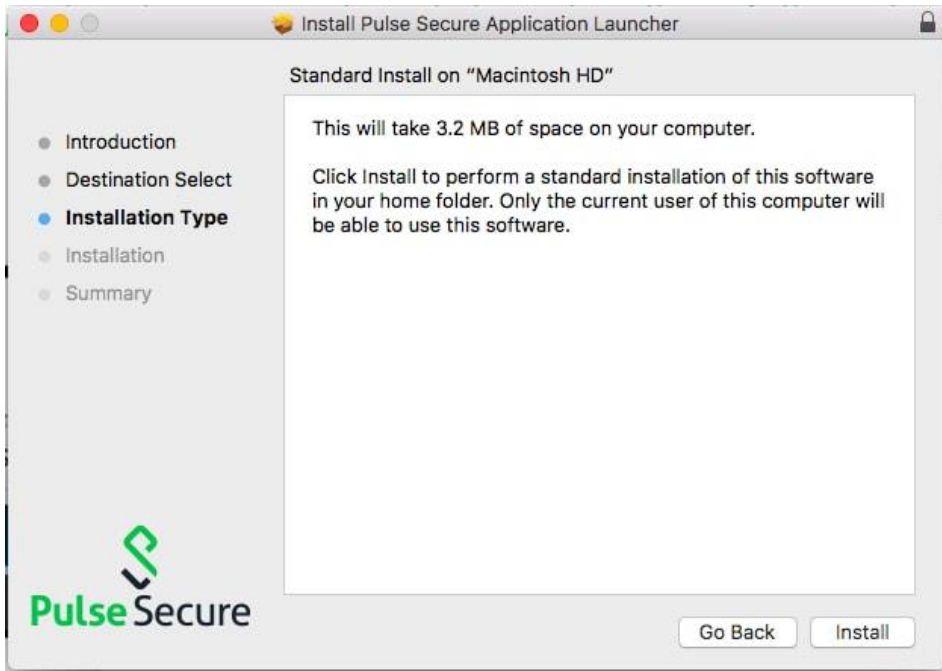

5. Double click to install the same.

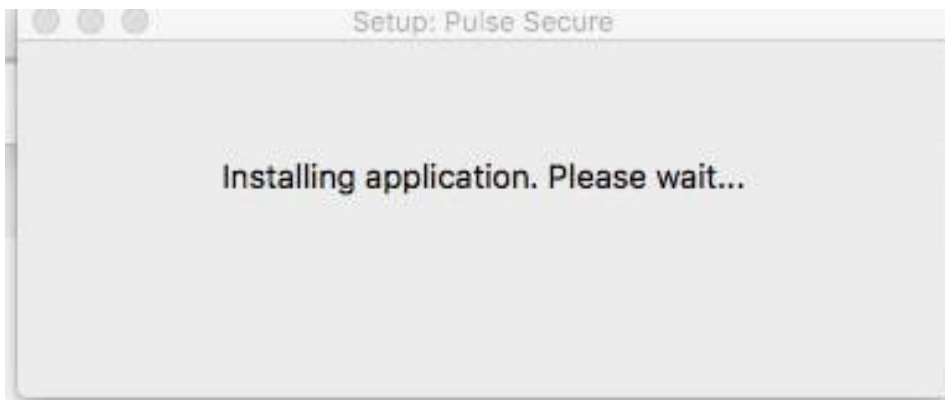

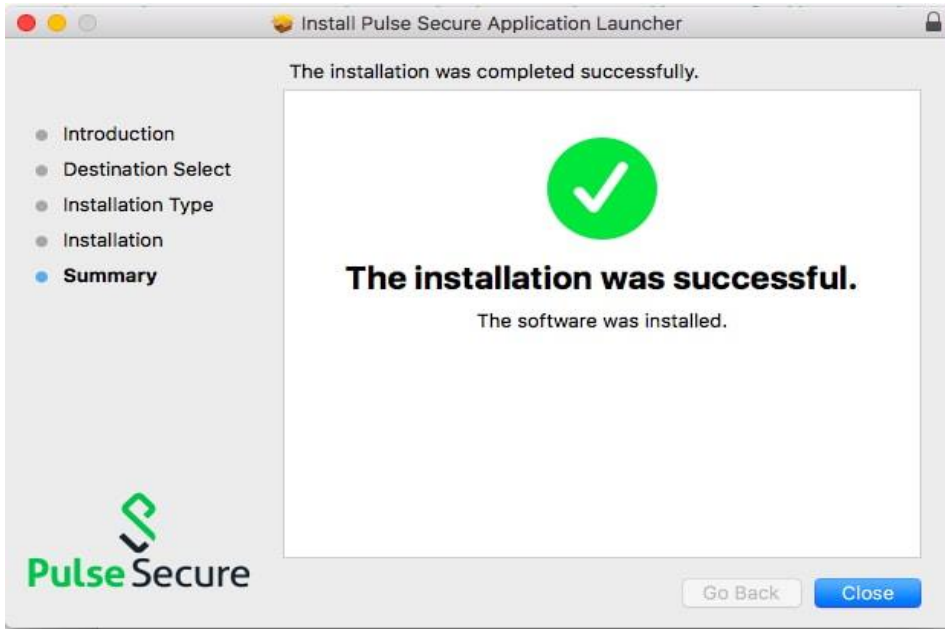

6. Follow as per the screen shot to install the pulse secure client. Click on Continue button to proceed for the installation.

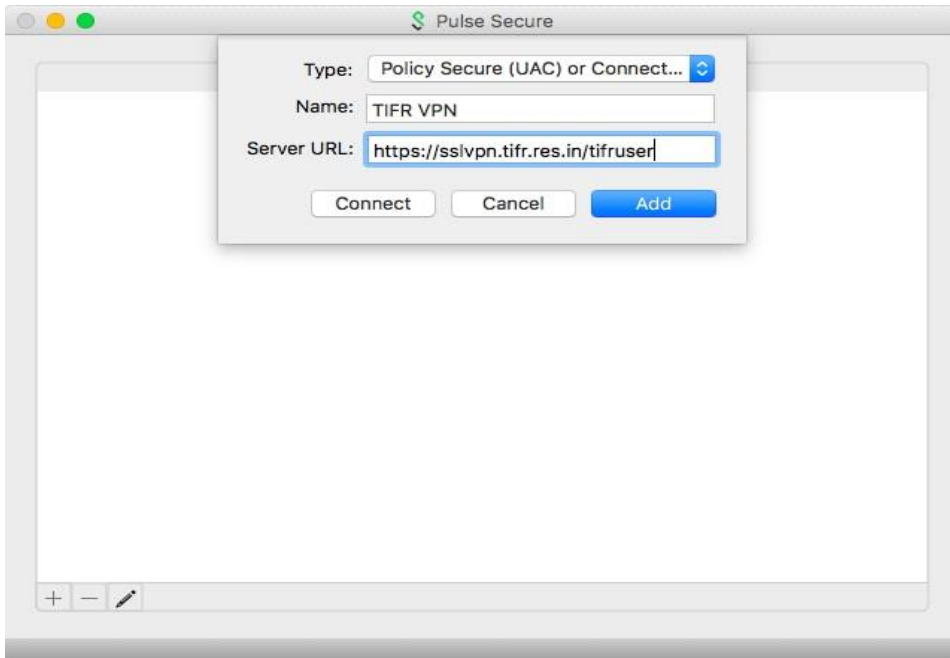

7. Click on Install button.

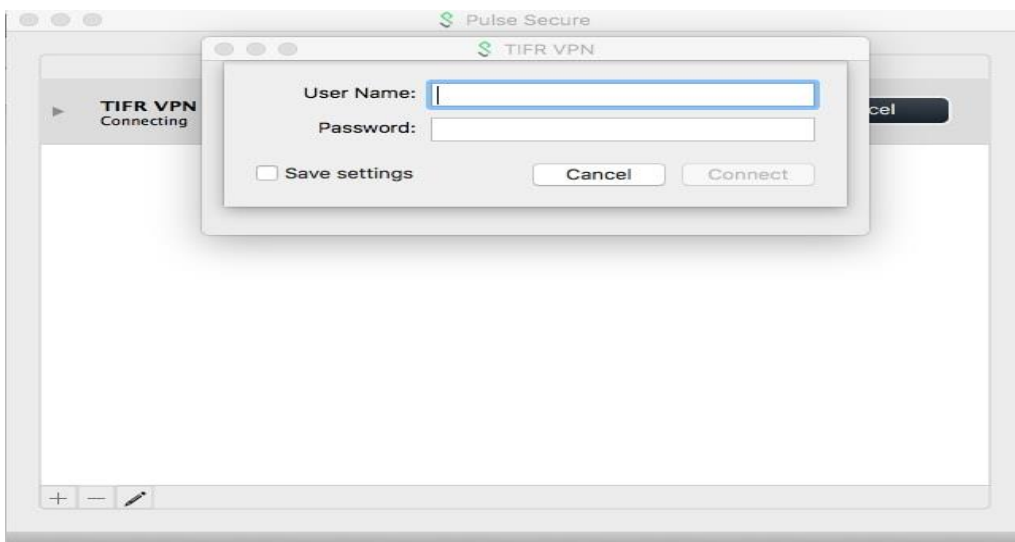

8. After successful installation, click on close button.

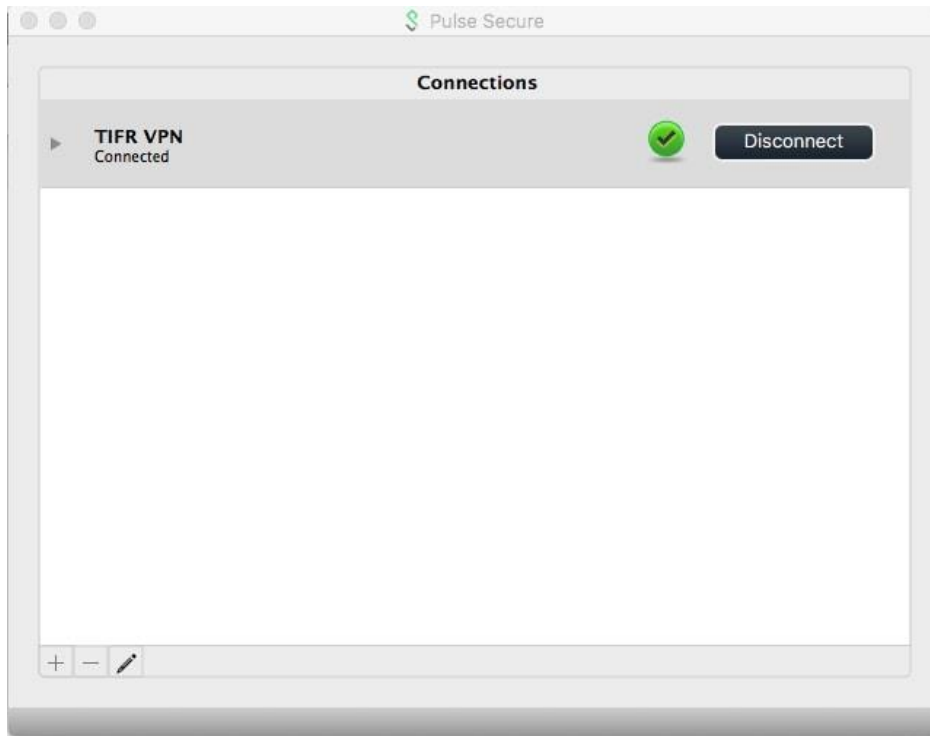

9. Application will launch. Enter the Name as “TIFR VPN” and Server URL as <https://sslvpn.tifr.res.in/tifruser> and click on Add button to save the connection.

10. Click on Connect button it will ask you for the credentials. Log on with your credentials to establish the SSL-VPN connection.

11. Finally, it will shown as Connected.

Note: Once the client gets install properly, no need to login via browser every time. Just use the client to connect to the SSL-VPN.
