

## **Procedure to install configure and use SSL-VPN in Android system**

### Operating System Compatibility

- Pie version 9.0
- Q version 10.0
- R version 11.0

Tested on above flavors of Android. May work on other flavors of Android also, users can try.

### How to download, install and configure Ivanti Connect Secure in Android device:

1. Download Ivanti Connect Secure from Play Store in your android device and click to install it.
2. Click on Open button to open the application and enter the URL as <https://sslvpn.tifr.res.in/tifruser> and click on Connect button.
3. Enter the Connection name as "TIFR VPN" (it can be anything).
4. Enter the URL as "<https://sslvpn.tifr.res.in/tifruser>" (It comes automatically).
5. Enter the Username as provided to you.
6. Choose Authentication Type as "Password".
7. Enter the Realm as "tifruser".
8. Enter the Role as "tifruser".
9. Click on Add Connection button to create the connection.
10. Now click on Connect button to connect the session and it will ask you to enter the password.
11. After successful login, a message will be displayed. Click on OK button to proceed. Your Connection will be shown as Active.
12. Minimize the session and you can proceed further.
13. To sign out from the established session, slide from top of your device's screen and click on the 3 dots of your connection and click on Disconnect button.
