

Procedure to use Pulse Secure in Windows 10 operating system

1. Type “Microsoft Store” in search bar at the bottom left your Windows.
2. On the upper right, search for “Pulse Secure App” in search bar.
3. Click on “Get” button to download and install. Download and Installation process will start automatically.
4. After Installation, launch button will appear. Click on it.
5. Click on VPN Settings.
6. Under VPN, click on “Add a VPN connection”.
7. Under VPN provider, select Pulse Secure.
8. Under Connection name type as “TIFR VPN”.
9. Under Server name or address type as <https://sslvpn.tifr.res.in/tifruser>
10. Click on “Save” button to save the changes made.
11. A connection will be created as “TIFR VPN”, select it and click on “Connect” button.
12. You will be asking to enter the credentials. Enter the credentials of your VPN account and click on “OK” button to get connected to the VPN connection.
13. Once connected, you will get IP address in the range of 158.144.38.x series.
